(54) **PERFUME BASE AND EXTERNAL PERFUME**

(57) Abstract:

PROBLEM TO BE SOLVED: To provide an external perfume and base for perfume capable of reconciling the both easiness of applying to living body (skin, etc.) (and stability, quickness) and/or easiness of removing from living body.

SOLUTION: This base for the perfume and the external

perfume contains at least water and a gel forming component. A polymer compound having the solution sol-gel transition point $\approx 10^{\circ}\text{C}$ and $\leq 37^{\circ}\text{C}$ is used as gel forming component, and as a whole manifests practical insolubility in water at the temperature higher than the sol-gel transition point, and manifests reversible water solubility at lower than the sol-gel transition point.
